3	CONTRACT LIMITS	1

3 CONTRACT LIMITS

- 3.1 The general Contract Limits are indicated in the Authority's Drawings.
- 3.2 The works required to be performed under the Contract may extend to areas beyond the Contract Limits. In particular, the Contractor shall note that works at the interfaces with other civil contracts, advance works contracts, SWC contracts, utility diversions, sewer works, road works and other works required under this Contract as shown on the Authority's Drawings and mentioned in the Particular Specification, may extend beyond the Contract Limits. For such works, the Contractor shall obtain the approval of the Authority and the acceptance of the Engineer before proceeding with the works. Provisions to comply with the Authority's Requirements and those of other authorities for these works shall be deemed to be included in the Contract Price.
- 3.3 The Contractor shall note that due to Temporary Works, temporary traffic diversions, utility diversions, staging of works, provision of proper tie-in with existing drainage scheme, provision of proper connection with existing roads etc, it may be necessary to extend beyond the contract boundary indicated on the site plans. Such extension of the site boundary shall be coordinated with the adjacent contractors and submitted for acceptance by the Engineer. Such works shall not affect other contractors' works.
- 3.4 The Contractor shall note that the extent of works for road markings, installation of new traffic and directional signs, installation of gantry signs and removal of redundant signs do not necessarily coincide with the Contract boundary.
- 3.5 The Contractor shall not carry out any work beyond the road reserve lines and available work area without the permission of relevant authorities and land owners. The Contractor shall indemnify the Authority from any claims arising out of any such encroachment. If works are required to be carried out beyond the available work area and road reserve, the Contractor shall be responsible to obtain the necessary approvals from the relevant authorities and land owners, and comply with their requirements, at no additional time and cost implications.
